

Artem Noskov

Backend Engineer · PHP / Laravel · Go · AI / LLM

Chelyabinsk, Russia · Remote | artem@noartem.ru | t.me/nooskoov | github.com/noartem | noartem.ru

SUMMARY

Backend engineer with 6+ years of experience. My main stack is PHP/Laravel, with Go for performance-critical services. In a bank's R&D department I own internal services end to end, from gathering requirements with stakeholders to running them in production, and bring self-hosted LLMs into the bank's infrastructure: an AI Gateway, MCP servers for AI agents, document recognition. Nearly 4 years of fullstack work with Vue and TypeScript help me design APIs that are easy for frontend teams to consume.

EXPERIENCE

Backend Engineer (R&D)

May 2025 — Present

Metallinvestbank

Chelyabinsk

Top-30 Russian bank by assets, ACRA credit rating "A". R&D team of 7. Stack: PHP, Laravel, Go, Vue, Python, PostgreSQL, Ollama, MCP

- Single-handedly built a vacation planning service (Laravel, Vue) with role-based access control and integrations; used by a department of 100+ employees, with a bank-wide rollout in preparation.
- Single-handedly designed and built monitoring for internal systems, with the service poller written in Go. Designed a protocol through which services report their own status and dependency tree, so connecting a new service takes minutes.
- Co-developed an AI Gateway in Go, a single entry point to the bank's LLMs: access tokens, usage accounting, and task-level requests such as "recognize a passport" that are routed to the right fine-tuned model automatically.
- Built an MCP server for the Diasoft core banking database (thousands of poorly documented tables and functions): merged documentation, an XML schema export and heuristics from test data into a ~100 MB SQLite index with fast search and no vector DB. Developers use it daily.
- Built MCP search over documentation on a network drive and in Confluence, with incremental indexing and permission-aware access control. Search quality is higher than with off-the-shelf integrations.
- Own the tax document registry: consolidating documents from several systems, neural-network recognition of scans with manual verification, and automated delivery of documents on Federal Tax Service requests.
- Co-developed a meeting minutes service for management: recording, speaker diarization, transcription, summarization and template-based minutes; also runs in the bank's isolated secure network.
- Deploy LLMs on the bank's own hardware, benchmark models and providers, and fine-tune models for bank-specific tasks.

Backend Engineer

Mar 2024 — May 2025

Lofty

Chelyabinsk

SMM services marketplace, team of 16. Stack: PHP, Laravel, Go, MySQL, Redis, RabbitMQ, Docker, Kubernetes

- Rewrote a key microservice from PHP to Go while meeting request processing time requirements; maintained and extended Go microservices.
- Built a business messenger integration: user metrics sync to the customer card in the chat in real time, so support agents no longer switch to the admin panel.
- Integrated the accounting service with the internal payment system so that financial transaction statistics are delivered in real time.
- Implemented automated migration of customers and conversation history between customer support platforms.

Fullstack Engineer

Aug 2020 — Mar 2024

TPT Hub

Chelyabinsk

Fleet logistics management system, 9 developers. Stack: PHP 8, Laravel 10, PostgreSQL, Redis, Vue, TypeScript

- Built the API and backend logic for the passenger app: route-based transfer booking, trip tracking, and communication with drivers and support.
- Built real-time chat for client companies' employees (WebSockets, Laravel Echo): direct, department-wide and cross-company chats.
- Smoothed GPS tracks with a Kalman filter, making vehicle movement on the map (Mapbox) more accurate and responsive.
- Built Vue and TypeScript interfaces (admin dashboard with D3.js, i18n); wrote unit and E2E tests (PHPUnit, Jest, Playwright).

SKILLS

Languages & Frameworks | PHP (Laravel), Go, SQL, TypeScript / JavaScript (Vue.js), Python

Data & Messaging | PostgreSQL, MySQL, Redis, RabbitMQ, SQLite

Infrastructure & Tools | Docker, Kubernetes, Git, REST, gRPC, WebSockets, PHPUnit, Playwright

AI / LLM | self-hosted LLMs, Ollama, MCP, RAG, model fine-tuning, PyTorch, Claude Code, OpenCode

Languages | Russian — native, English — B2 (Upper-Intermediate)

EDUCATION

South Ural State University, Fundamental Computer Science & IT: MSc — 2026, BSc — 2024

Chelyabinsk
